Dashboard

After logging in with google, you should be redirected to this dashboard.

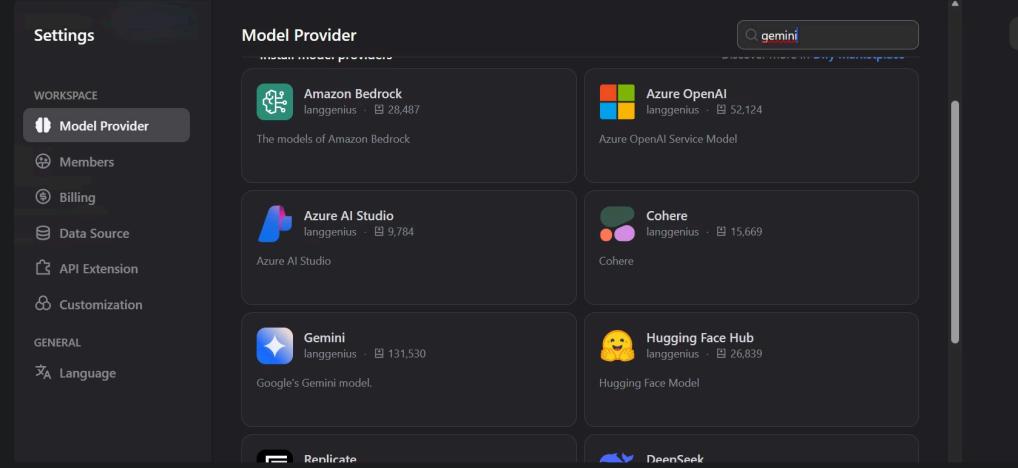

Go to Settings

on the upper right, you can see a profile icon. Click the profile icon and go to settings.

go to Model Provider

on the settings page, click on the model provider.

Search gemini

on the upper right, you can type in 'gemini' and click on it.
That's the model provider we'll use.

Install Plugin

About to install the following plugin

Gemini 0.5.11

langgenius/gemini

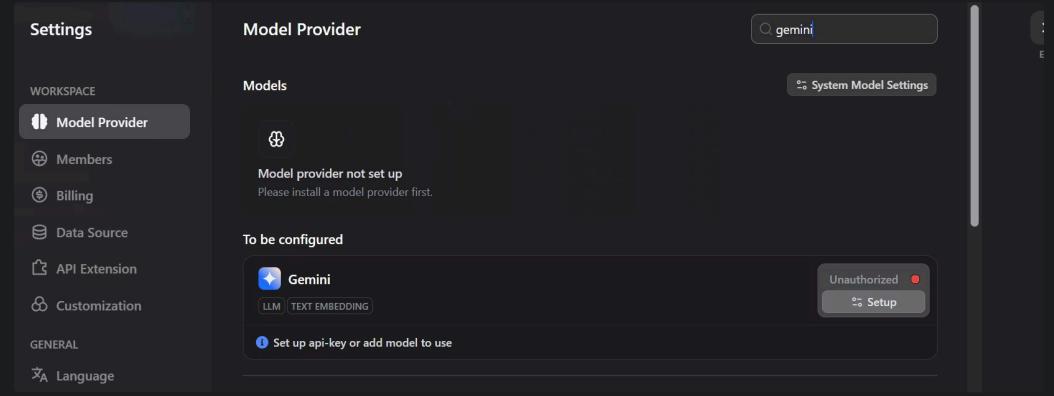

Google's Gemini model.

MODEL

Cancel

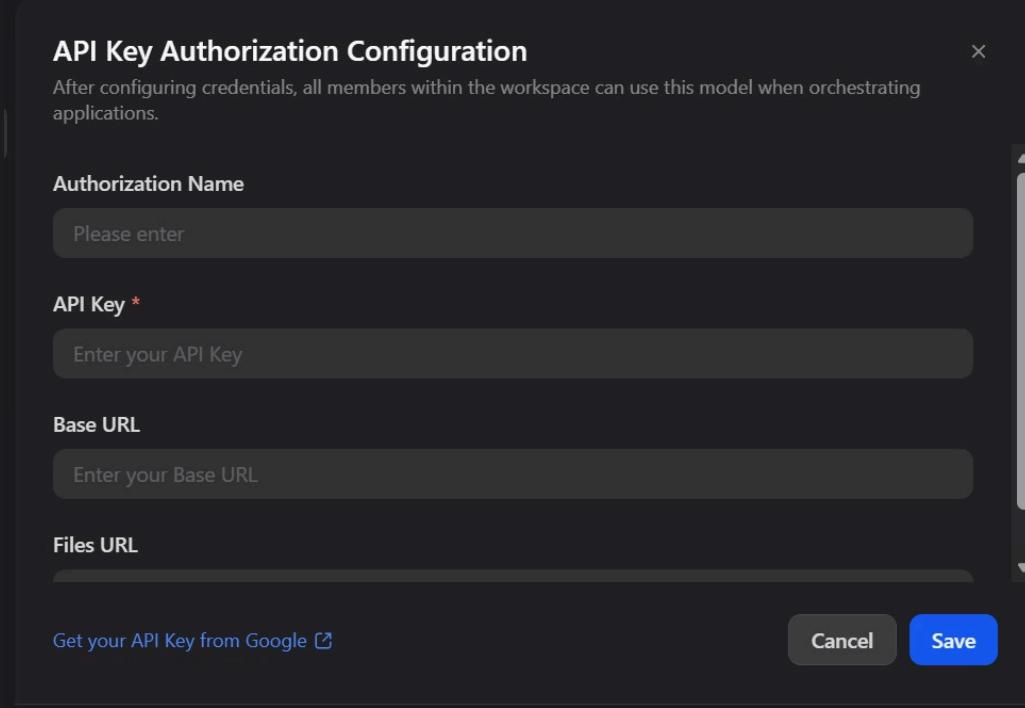

Install

Install gemini

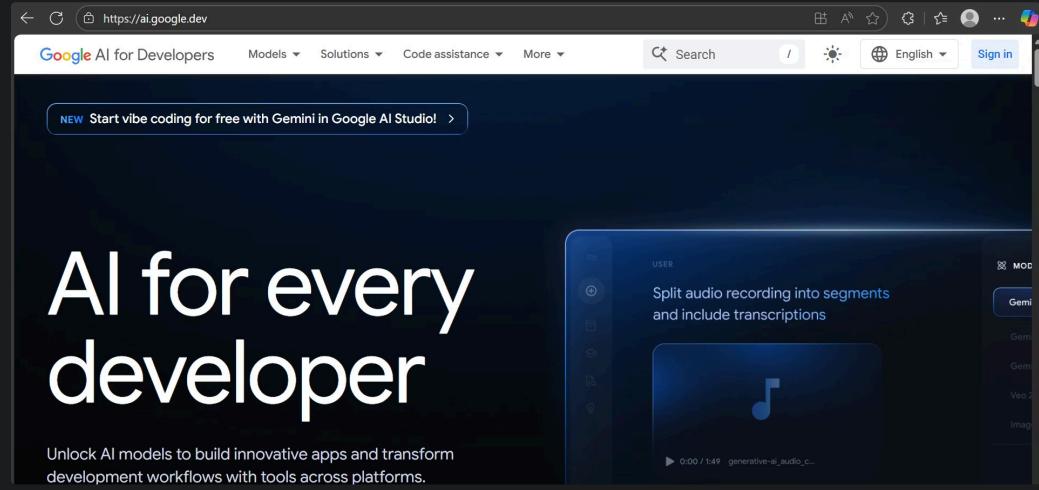

Setup gemini

click Setup

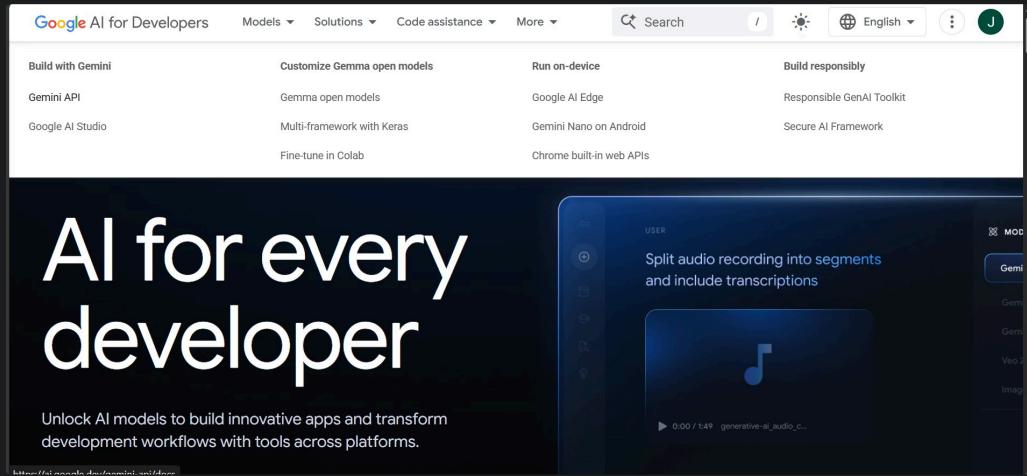

Click the link on the
bottom left

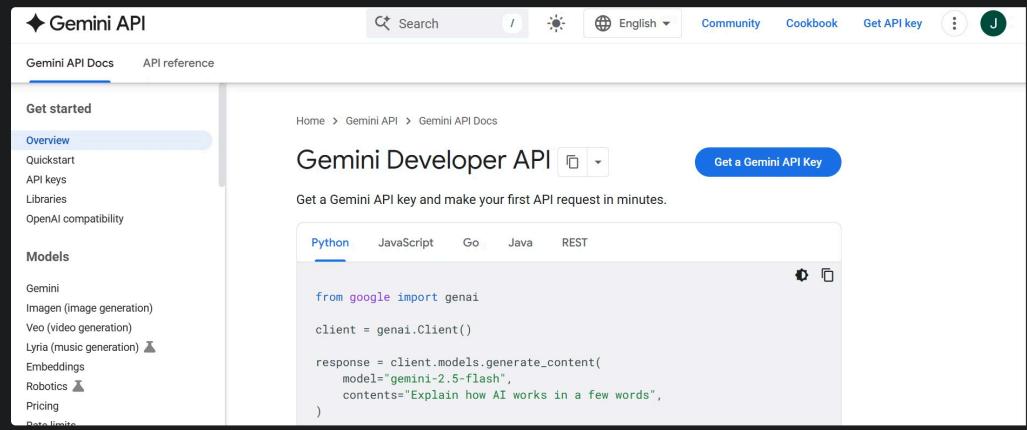

Click sign-in

on the upper right, click on sign-in; sign-in with the google account you used to sign in with dify earlier.

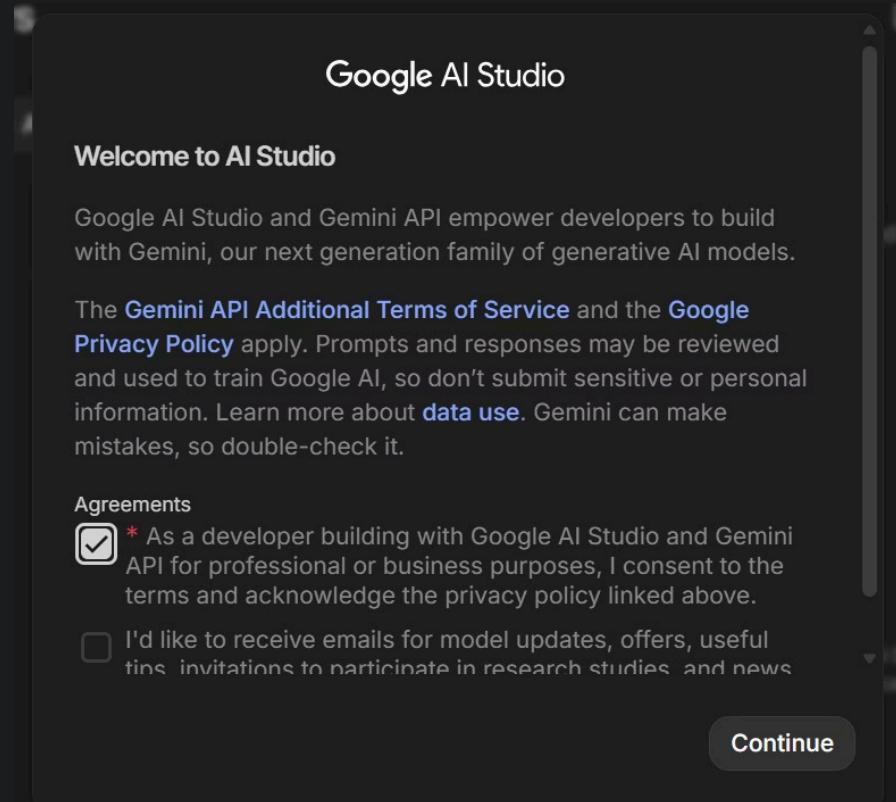

Hover on solutions link on the navbar

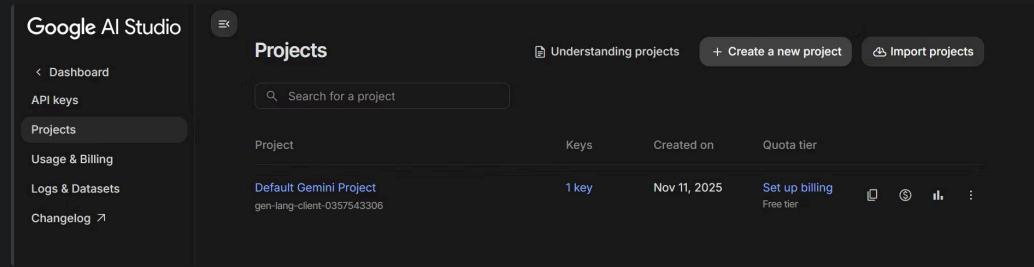

click the Gemini API on the left side.

Click on Get a gemini API key

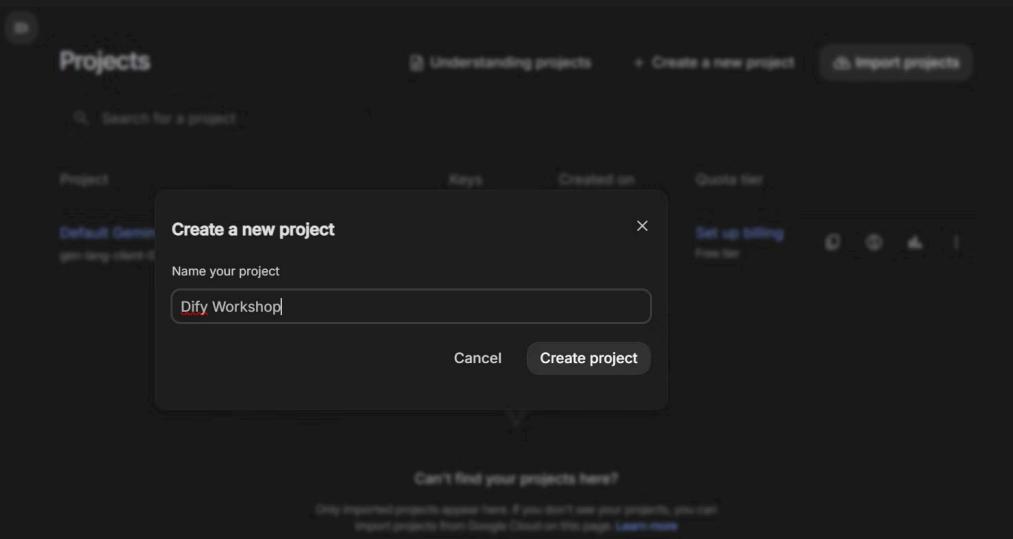

check the first box and
continue

click the Projects tab
below the API keys

Create a new project on the upper right

Click create project

Can't find your API keys here?

This list only shows API keys for projects imported into Google AI Studio.
Import other projects to manage their associated API Keys. You can also
create a new API Key above. [Learn more](#)

Import projects

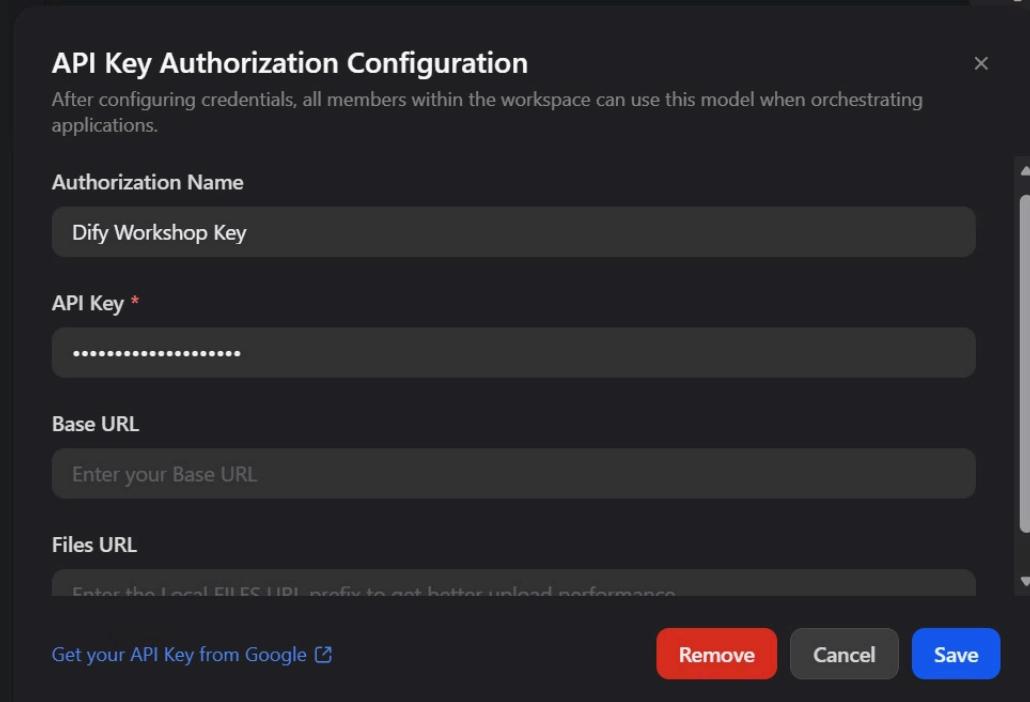

on the upper right click
on create api key

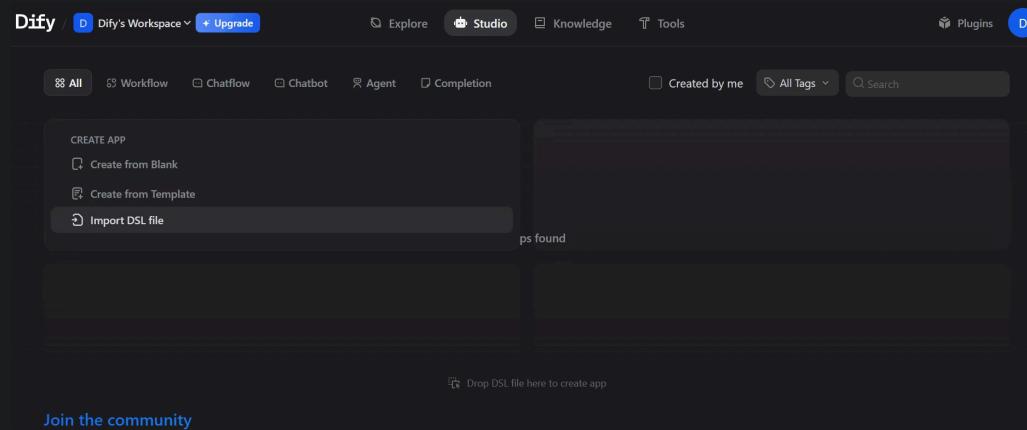

Name your key, and choose the project you created earlier and click create

| Key | Project | Created on | Quota tier | |
|--|---|--------------|-----------------------------|---|
| ...kH10 Dify Workshop Key | Dify Workshop gen-lang-client-0984549442 | Nov 11, 2025 | Set up billing Free tier |     |

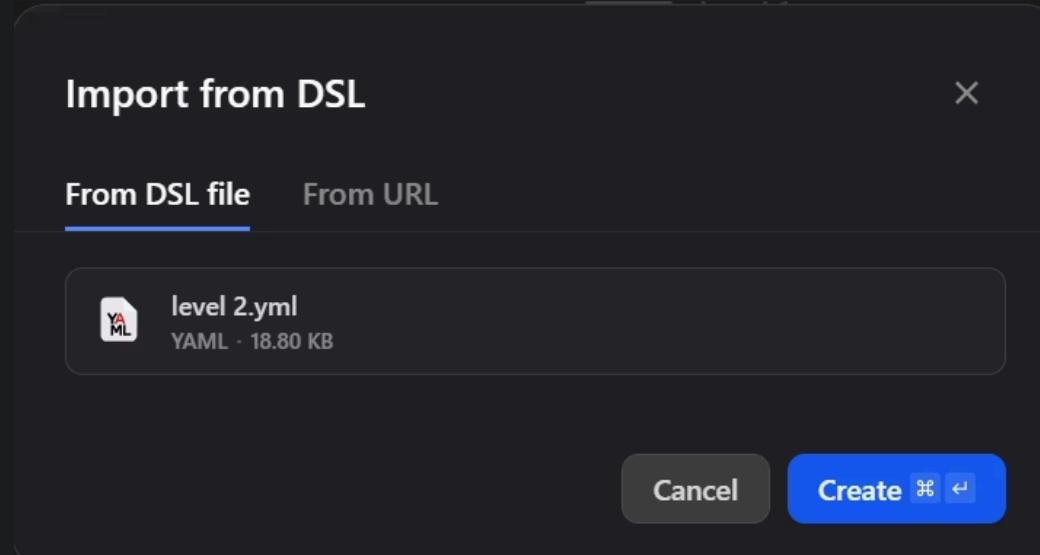

You can click on the key, and a pop up of your API key details will be shown.

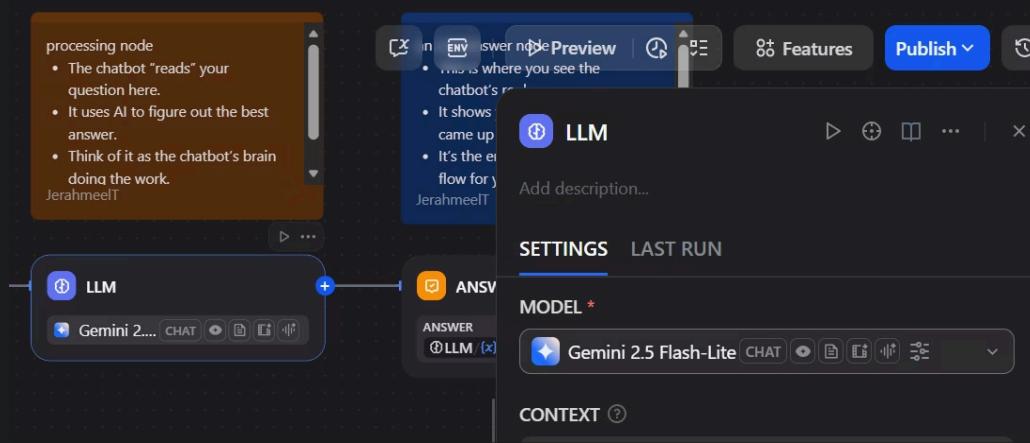

Fill in the authorization name, and you can paste your API key and click save.

Go to Dashboard and click on import DSL file, and upload the DSL file provided to you.

Click create, and just deselect all if you see an alert saying that it needs to install OpenAI

Click the LLM node,
and from the model,
select gemini 2.5 flash-
lite.
